

SQL Practice Project -1 submitted by Sujit Sonar:

Retail Mart Management.

DESCRIPTION

A data analyst of a retail shop, Happy Mart, wants to store the product details, the customer details, and the order details to provide unparalleled insights about customer behavior and product stock details daily.

Objective:

The design of the database helps to easily evaluate and identify the performance of the shop to increase the daily sales.

Task to be performed:

- Write a query to create a database named **SQL basics**.

Create database if not exists SQL_basics;

- Write a query to select the database **SQL basics**.
use SQL_basics;
- Write a query to create a **product table** with fields as product code, product name, price, stock and category, **customer table** with the fields as customer id, customer name, customer location, and customer phone number and, **sales table** with the fields as date, order number, product code, product name, quantity, and price.

Customer Table:

```
create table customer_table(  
  c_id int not null primary key,  
  c_name varchar(225),  
  c_location varchar(225),  
  c_phoneno varchar(225);
```

Product Table:

```
create table product_table(  
  p_code int not null primary key,  
  p_name varchar(225),  
  price double;  
  stock int,  
  category varchar(225);
```

Sales Table:

```
create table sales_table(  
  order_date date,  
  order_no varchar(225),  
  c_id int,  
  c_name varchar(225),  
  c_code int,  
  p_name varchar(225),  
  qty int,  
  price double;
```

| | | |
|---|---|---|
| Tables ▼ customer_table Columns c_id c_name c_location c_phoneno | product_table Columns p_code p_name price stock category | sales_table Columns order_date order_no c_id c_name c_code p_name qty price |
|---|---|---|

- Write a query to **insert values** into the tables.

Inserting values into product_table:

*Insert into SQL_basics.prodct_table
(p_code, p_name, price, stock, category)
Values*

(1,'tulip',198,5,'perfume')
 (2,'cornoto',50,21,'icecream')
 (3,'Pen',10,52,'Stationary')
 (4,'Lays',10,20,'snacks')
 (5,'mayanoise',90,10,'dip')
 (6,'jam',105,10,'spread')
 (7,'shampoo',5,90,'hair product')
 (8,'axe',210,4,'perfume')
 (9,'park avenue',901,2,'perfume')
 (10,'wattagirl',201,3,'perfume')
 (11,'pencil',4,10,'Stationary')
 (12,'sharpener',5,90,'Stationary')
 (13,'sketch pen',30,10,'Stationary')
 (14,'tape',15,30,'Stationary')
 (15,'paint',60,12,'Stationary')
 (16,'chocolate',25,50,'snacks')
 (17,'biscuits',60,26,'snacks')
 (18,'mango',100,21,'fruits')
 (19,'apple',120,9,'fruits')
 (20,'kiwi',140,4,'fruits')
 (21,'carrot',35,12,'vegetable')
 (22,'onion',22,38,'vegetable')
 (23,'tomato',21,15,'vegetable')
 (24,'serum',90,4,'hair product')
 (25,'conditioner',200,5,'hair product')
 (26,'oil bottle',40,2,'kitchen utensil');

| # | p_code | p_name | price | stock | category |
|---|--------|-----------|-------|-------|------------|
| 1 | 1 | tulip | 198 | 5 | prfume |
| 2 | 2 | cornoto | 50 | 21 | icecream |
| 3 | 3 | Pen | 10 | 52 | Stationary |
| 4 | 4 | Lays | 10 | 20 | snacks |
| 5 | 5 | mayanoise | 90 | 10 | dip |
| 6 | 6 | jam | 105 | 10 | spread |

Inserting values into customer_table:

Insert into table SQL_basics.customer_table

(c_id int, c_name, c_location, c_phoneno)

Values

*(1111,'Nisha',kerala,'8392320')
(1212,'Oliver',kerala,'4353891')
(1216,'Nila',delhi,'3323242')
(1246,'Vignesh',chennai,'1111212')
(1313,'shiny',Maharastra,'5454543')
(1910,'Mohan',mumbai,'9023941')
(2123,'Biyush',Bombay,'1253358')
(3452,'Alexander',West Bengal,'1212134')
(3921,'Mukesh',Manipur,'4232321')
(5334,'Christy',pakistan,'2311111')
(9021,'Rithika',Kashmir,'1121344')
(9212,'Jessica',banglore,'1233435')
(9875,'Stephen',chennai,'1212133');*

| # | c_id | c_name | c_location | c_phoneno |
|---|------|---------|------------|-----------|
| 1 | 1111 | Nisha | kerala | 8392320 |
| 2 | 1212 | Oliver | kerala | 4353891 |
| 3 | 1216 | Nila | delhi | 3323242 |
| 4 | 1246 | Vignesh | chennai | 1111212 |
| 5 | 1313 | shiny | Maharastra | 5454543 |
| 6 | 1910 | Mohan | mumbai | 9023941 |

Inserting values into sales_table:

Insert into SQL_basics.sales_table

(order_date, order_no, c_id, c_name, c_code, p_name, qty, price)

Values

*('2016-24-07','HM06',9212,'Jessica',11,'pencil',3,30)
('2016-19-10','HM09',3921,'Mukesh',17,'biscuits',10,600)
('2016-30-10','HM10',9875,'Stephen',2,'cornoto',10,500)
('2018-12-04','HM03',1212,'Oliver',20,'kiwi',3,420)
('2018-02-05','HM05',1910,'Mohan',20,'kiwi',2,280)
('2018-20-09','HM08',5334,'Christy',16,'chocolate',2,50)
('2019-11-01','HM07',1246,'Vignesh',19,'apple',5,600)
('2019-15-03','HM01',1910,'Mohan',5,'mayanoise',4,360)
('2021-10-02','HM04',1111,'Nisha',25,'conditioner',5,1000)
('2021-12-02','HM02',2123,'Biyush',3,'Pen',2,20);*

| # | order_date | order_no | c_id | c_name | c_code | p_name | qty | price |
|---|------------|----------|------|---------|--------|-----------|-----|-------|
| 1 | 2016-07-24 | HM06 | 9212 | Jessica | 11 | pencil | 3 | 30 |
| 2 | 2016-10-19 | HM09 | 3921 | Mukesh | 17 | biscuits | 10 | 600 |
| 3 | 2016-10-30 | HM10 | 9875 | Stephen | 2 | cornoto | 10 | 500 |
| 4 | 2018-04-12 | HM03 | 1212 | Oliver | 20 | kiwi | 3 | 420 |
| 5 | 2018-05-02 | HM05 | 1910 | Mohan | 20 | kiwi | 2 | 280 |
| 6 | 2018-09-20 | HM08 | 5334 | Christy | 16 | chocolate | 2 | 50 |

- Write a query to add two new columns such as **S_no** and **categories** to the sales table.

alter table SQL_basics.sales_table

Add column S_no int,

Add column categories varchar(225);

Result Grid Filter Rows: Export: Wrap Cell Content:

| # | order_date | order_nc | c_id | c_name | c_code | p_name | qty | price | S_no | categories |
|---|------------|----------|------|---------|--------|----------|-----|-------|------|------------|
| 1 | 2016-07-24 | HM06 | 9212 | Jessica | 11 | pencil | 3 | 30 | | |
| 2 | 2016-10-19 | HM09 | 3921 | Mukesh | 17 | biscuits | 10 | 600 | | |
| 3 | 2016-10-30 | HM10 | 9875 | Stephen | 2 | cornoto | 10 | 500 | | |

- Write a query to change the column type of **stock** in the product table to **varchar**.

Result Grid Filter Rows: Export:

| # | Field | Type | Null | Key | Default | Extra |
|---|----------|--------------|------|-----|---------|-------|
| 1 | p_code | int | NO | PRI | | |
| 2 | p_name | varchar(255) | YES | | | |
| 3 | price | double | YES | | | |
| 4 | stock | int | YES | | | |
| 5 | category | varchar(255) | YES | | | |

alter table SQL_basics.product_table

change column stock stock varchar(225);

Result Grid Filter Rows: Expo

| # | Field | Type | Null | Key | Default | Extra |
|---|----------|--------------|------|-----|---------|-------|
| 1 | p_code | int | NO | PRI | | |
| 2 | p_name | varchar(255) | YES | | | |
| 3 | price | double | YES | | | |
| 4 | stock | varchar(225) | YES | | | |
| 5 | category | varchar(255) | YES | | | |

- Write a query to **change** the table name from **customer-to-customer** details.

alter table SQL_basics.customer_table

rename customer_details;

SQL_basics

- Tables
 - customer_details
 - product_table
 - sales_table

- Write a query to **drop** the columns **S_no** and **categories** from the sales table.

alter table SQL_basics.sales_table

drop column S_no,

drop column categories;

16 • `select * from SQL_basics.sales_table;`

Result Grid Filter Rows: Export: Wrap Cell Content:

| order_date | order_nc | c_id | c_name | c_code | p_name | qty | price |
|------------|----------|------|---------|--------|----------|-----|-------|
| 2016-07-24 | HM06 | 9212 | Jessica | 11 | pencil | 3 | 30 |
| 2016-10-19 | HM09 | 3921 | Mukesh | 17 | biscuits | 10 | 600 |
| 2016-10-30 | HM10 | 9875 | Stephen | 2 | cornoto | 10 | 500 |

- Write a query to **display** order id, customer id, order date, price, and quantity from the sales table.

```
24 • select order_no, c_id, order_date, price, qty from SQL_basics.sales_table;
```

| order_no | c_id | order_date | price | qty |
|----------|------|------------|-------|-----|
| HM06 | 9212 | 2016-07-24 | 30 | 3 |
| HM09 | 3921 | 2016-10-19 | 600 | 10 |
| HM10 | 9875 | 2016-10-30 | 500 | 10 |
| HM03 | 1212 | 2018-04-12 | 420 | 3 |
| HM05 | 1910 | 2018-05-02 | 280 | 2 |

- Write a query to display all the details in the product table if the **category** is **stationary**.

```
27 • select * from SQL_basics.product_table
28 where category = 'Stationary';
```

| # | p_code | p_name | price | stock | category |
|---|--------|------------|-------|-------|------------|
| 1 | 3 | Pen | 10 | 52 | Stationary |
| 2 | 11 | pencil | 4 | 10 | Stationary |
| 3 | 12 | sharpner | 5 | 90 | Stationary |
| 4 | 13 | sketch pen | 30 | 10 | Stationary |
| 5 | 14 | tape | 15 | 30 | Stationary |
| 6 | 15 | paint | 60 | 12 | Stationary |

- Write a query to display a **unique category** from the product table.

```
27 • select distinct category from SQL_basics.product_table
```

| # | category |
|---|------------|
| 1 | perfume |
| 2 | icecream |
| 3 | Stationary |
| 4 | snacks |
| 5 | dip |
| 6 | spread |

- Write a query to display the sales details if **quantity is greater than 2** and **price is lesser than 500** from the sales table.

```
24 • select * from SQL_basics.sales_table
25 where qty > 2 and price < 500;
```

| # | order_date | order_no | c_id | c_name | c_code | p_name | qty | price |
|---|------------|----------|------|---------|--------|-----------|-----|-------|
| 1 | 2016-07-24 | HM06 | 9212 | Jessica | 11 | pencil | 3 | 30 |
| 2 | 2018-04-12 | HM03 | 1212 | Oliver | 20 | kiwi | 3 | 420 |
| 3 | 2019-03-15 | HM01 | 1910 | Mohan | 5 | mayanoise | 4 | 360 |

- Write a query to display the customer's name if the **name ends with a**.

```
27 • select c_name from SQL_basics.customer_details
28 where c_name like '%a';
```

| c_name |
|---------|
| Nisha |
| Nila |
| Ritika |
| Jessica |

- Write a query to display the product details in **descending order** of the **price**.

```
30 • select * from SQL_basics.product_table
31 order by price desc;
```

| p_code | p_name | price | stock | category |
|--------|-------------|-------|-------|--------------|
| 9 | park avenue | 901 | 2 | prfume |
| 8 | axe | 210 | 4 | prfume |
| 10 | wattagirl | 201 | 3 | prfume |
| 25 | conditioner | 200 | 5 | hair product |
| 1 | tulip | 198 | 5 | prfume |
| 20 | kiwi | 140 | 4 | fruits |

- Write a query to display the product code and category from **similar categories** that are **greater than or equal to 2**.

```
11 • select p_code,category from SQL_basics.product_table
12 where category in (select category from
13 (select category ,count(category) as cat_count from SQL_basics.product_table
14 group by category
15 having cat count >=2)p);
```

| # | p_code | category |
|---|--------|--------------|
| 1 | 1 | prfume |
| 2 | 3 | Stationary |
| 3 | 4 | snacks |
| 4 | 7 | hair product |
| 5 | 8 | prfume |
| 6 | 9 | prfume |

- Write a query to display the order number and the customer name to **combine** the results of the order and the customer tables including **duplicate rows**.

```
24 • select c.c_name, s.order_no from SQL_basics.sales_table s
25 left join SQL_basics.customer_details c on s.c_id = c.c_id
26 order by c.c_name;
```
